II. Zoosanitary information	I.2. Certificate reference number*:
Part II: Zoosanitary information	<p>The horse identified in this certificate has:</p> <ol style="list-style-type: none"> 1. been in the region for 60 days immediately preceding shipment to the United States; <p><i>If the horse has not been in Switzerland 60 days immediately preceding importation, it has to be accompanied by a health certificate issued by a full-time salaried veterinary officer of the National Government of each country in which the horse has been during the 60 days immediately preceding shipment to the United States.</i></p> <ol style="list-style-type: none"> 2. been inspected and found free of contagious diseases and, insofar as can be determined, free of exposure thereto during the 60 days immediately preceding exportation; 3. not been vaccinated with a live or attenuated or inactivated vaccine during the 14 days immediately preceding exportation; 4. not been on premises where African horse sickness, contagious equine metritis (CEM), dourine, glanders, surra, epizootic lymphangitis, ulcerative lymphangitis, equine piroplasmiasis (EP), equine infectious anemia (EIA), Venezuelan equine encephalomyelitis (VEE) or vesicular stomatitis has occurred during the 60 days immediately preceding exportation, nor have diseases occurred on any adjoining premises during this same period of time. <p>The horse has been inspected and found to be free from ectoparasites.</p> <p>In regard to Contagious Equine Metritis (CEM), for all stallions and mares over 731 days of age, and for stallions and mares under 731 days of age which have been bred, the official health certificate must include the following attestations:</p> <ol style="list-style-type: none"> 1. <u>For stallions:</u> culture specimens taken from the prepuce, urethral sinus, fossa glandis (including the diverticulum of the fossa glandis) and distal urethra have been cultured with negative results. <u>For mares:</u> culture specimens taken from the clitoral sinuses and clitoral fossa, and if the mare is not pregnant, the distal cervix or endometrium have been cultured with negative results. <p><i>Please note that the dates and time of specimen collection and culturing, and the results of such cultures with the name of the laboratory must be recorded on the health certificate.</i></p> <ol style="list-style-type: none"> 2. All specimens were collected within 30 days of the date of export, and were received within 48 hours of collection by a laboratory approved by the animal health authorities of the National Veterinary Service of the region of export. 3. The horse has not been bred naturally or by artificial insemination from the period of time after specimen collection until the horse was exported. <p><i>Please note that If any specimen collected is found to be positive for CEM, the stallion or mare must be treated for CEM in a manner approved by the National Veterinary Service of the region of export. After the treatment is completed, at least 21 days must pass before the horse will be eligible to be tested again. All test results, treatments performed, and the dates of the treatments must be recorded on the health certificate.</i></p>
